

we absolutely enjoy xm satellite radio. its crystal clear reception and the ability to listen to what we want to hear is why we pay for the service. i also find the instant traffic reports and weather conditions vital as my family does a lot of traveling. i use it all the time, as it helps me plan my route. i now will never listen to regular radio again. it is absolutely the worst compared to xm satellite radio. regular radio plays the same music over and over and blast you out with way to many commercials. xm is totally commercial free. that is why we opted for it. i respectfully urge you to reject NAB's petition04-160. thank you for reading.
